

Facts About CLOVE Cigarettes

Clove cigarettes are the most noxious cigarettes there are. They contain more carbon monoxide, more nicotine and more tar.

What can happen to your body if you smoke clove cigarettes?

- Your lung tissue becomes scarred so that it can't inflate properly (interstitial lung disease).
- Your lung tissue becomes filled with pus and bacteria (consolidation).
- Your lungs fill with fluid, and you feel like your drowning (pulmonary edema).
- Your airway can suddenly swell as you choke to death (anaphylaxis from allergic sensitivity).
- You have coughing spasms and choke on your own vomit (aspiration pneumonia from an anesthetized pharynx and tracheobronchial tree).
- You can't inhale or exhale because the airways clamp down (bronchospasm).
- You cough up blood (hemoptysis).
- Your lung bursts like a balloon and collapses (spontaneous pneumothorax).
